

GAMING MACHINE WITH RECEIPT GENERATION CAPABILITIES
ABSTRACT OF THE INVENTION

The invention comprises a gaming machine adapted to print receipts. In one embodiment, the gaming machine is associated with a gaming system including a player tracking or reward system. The gaming machine includes a receipt printer/generator. Game play data is stored remote from the gaming machine. In the event the player's play reaches a predetermined level or satisfies particular criteria, the player is provided an award. Information regarding the award is generated and stored remotely, and the gaming machine is caused to print a receipt which may be redeemed for the award. The award may be goods or services, such as a free dinner or additional game play. The award is separate from any winnings associated with a winning outcome of a game played on the machine. In one embodiment, the gaming machine is arranged to print a receipt containing operational data, such as gaming machine accounting or diagnosis information.
